Programme brief

This sample report shows the kind of premium package a CSR manager receives from LandCheck Green Corporate. It combines implementation footprint, governance controls, evidence coverage, survival visibility, and clear next actions into one exportable record for internal review, donor communication, and board reporting.

Implementation footprint

- 4 mapped field zones with polygon coverage already approved.
- Named field agents assigned through implementation orders.
- Species allocation can be attached at assignment stage for QR-tag printing.
- Supervisor review keeps planting, maintenance, and evidence status aligned.

Governance and controls

- Assignment logs show who was instructed, when, and for which site.
- GPS coordinates and photos remain tied to each verified record.
- Outstanding risks and low-evidence zones are visible before reporting.
- Public proof pages and certificates can extend transparency externally.

Reporting highlights

- Evidence-backed reporting supports leadership updates, partner briefings, and external storytelling.
- Mapped implementation coverage reduces ambiguity about where activity actually happened.
- Maintenance visibility helps teams speak honestly about programme quality after planting day.
- Exports are designed to support sustainability, CSR, donor, and communications workflows.

Site / Stakeholder	Trees	Alive	Evidence	Status
Adamawa urban belt school corridor	2,500	2,304	97%	Active
Community resilience cluster river buffer	3,000	2,761	95%	Monitored
Corporate volunteer grove pilot site	1,500	1,396	99%	Verified
Peri-urban restoration strip access road	3,000	2,672	94%	Needs follow-up

Risk, care cadence, and next actions

- Low-survival pockets should trigger targeted maintenance revisits, not only year-end reporting notes.
- Client exports should distinguish between approved records, rejected submissions, and evidence still outstanding.
- Where public or donor visibility is needed, link the report to a public proof page or certificate route for selected sites.
- Use this register alongside map snapshots, field photos, and timeline charts in the live reporting package.
